

Enforcing Strict Safe Search on Google

With SafeSearch, you can help prevent adult content from appearing in your search results.

WARNING: No filter is 100 percent accurate, but SafeSearch should help you avoid most of this type of material.

You can enable Safe Search without a Google account but it can easily be reverted back. To Lock your setting you need a Google account. If you don't already have one you can quickly create one at:

<https://accounts.google.com/signupwithoutgmail>

To switch on Safe Search go to:

https://support.google.com/websearch/answer/510?p=settings_safeSearch&hl=en-GB#safe

Note: enabling Safe Search in Google also enables it in Youtube.
